SPECIALTIES FOR FALL PLANTING

GLEN BROTHERS, Inc.
Glenwood Nursery
ROCHESTER, N. Y.

Northern Grown English Walnut Trees

For Universal Planting in Zero Climates

Northern English Walnut culture offers splendid opportunities for rich profit with the production of hardy, successful northern varieties. That they equal and even surpass the western and southern product is a remarkable scientific achievement.

English Walnuts are now grown successfully as far north as St. Catharines, Ontario, Canada, and there are several large and productive orchards between Rochester and Buffalo, enduring as low temperature as 20° below zero.

The largest of these is the Thomson orchard, consisting of 228 seedling trees, which last fall produced over 260 bushels of high-grade Walnuts. These were carefully examined by the U. S. experts and said to be on par with the finest California grade. A price wholesale of 25c per lb, was obtained, or nearly \$2,000.00 for the crop. No spraying, and only orchard cultivation.

In the matter of soils upon which they succeed, the English Walnut shows considerable versatility. The one requisite generally agreed upon is that there must be no rock or hard pan to stop or retard the growth of the tap-root. The richer soils are naturally best, as is the case in all other horticultural pursuits, but industry on the part of the orchardist, applied in the direction of careful cultivation and fertilization, will produce eminently successful orchards on indifferent soil. Continual hoeing and digging constitute the best treatment. An effective treatment for a young orchard is to plow between the rows after the spring rains cease and then stir the soil occasionally throughout the summer with disk or harrow. Moisture is thus retained much longer. No tree responds to cultivation as does the Walnut.

We have the following varieties which we heartily endorse for fall planting and which will grow and bear nuts wherever the peach will live and are as easily cared for.

Concord—Native of California. Enormous bearer, rapid grower.

Mayette—The Grenoble nut of commerce. Safe from late frosts.

Franquette—Peer of all foreign varieties. Exquisite dessert nut.

Pomeroy—Origin, western New York. A lofty growing tree. Annual bearer.

Prices—1-1½ ft., \$.50 each; \$5.00 per dozen; \$35.00 per 100.
2-3 ft., .75 each; 8.00 per dozen; 50.00 per 100.
3-4 ft., 1.00 each; 10.00 per dozen; 65.00 per 100.

Mayette—Special size early-bearing trees, ideal for transplanting for immediate effect.

Prices—6-8 ft., \$3.00 each; \$30.00 per dozen.

Fairport (Mayo)—A new and very valuable variety originated here. Tree rapid grower, bears at four years of age, nuts are ripe and fall from trees in September. The nuts bring 4c to 5c more per pound than the California Walnuts. A large orchard of these trees, near Rochester, bore a generous crop the sixth year. Meat is crisp and delicious. A splendid dessert nut as well as important commercially. The **ultimate** tree for commercial and ornamental planting.

Thomson—Real papershell. Origin, Avon, N. Y. A strong-growing ironclad variety, safe and reliable. A commercial nut for severe climates; sweet and delicious, selling at wholesale at a higher price per pound in Rochester markets than the California or French nuts.

Prices—2-3 ft., \$1.00 each; \$10.00 per dozen; \$60.00 per 100.
3-4 ft., 1.50 each; 15.00 per dozen; 100.00 per 100.
4-6 ft., 2.50 each; 25.00 per dozen.

Our Golden Anniversary Souvenir Rose Free With Every Order

SEP 27 1916

A view in the Thomson English Walnut orchard near Rochester. The largest commercial English Walnut orchard in the East, 228 trees raised from seed planted by Mr. Thomson in 1886. This orchard has endured all these years with absolutely no winter killing—with occasional temperatures twenty degrees below zero. This orchard last season (1915) produced 260 bushels, the bulk of which sold at 25c per pound—32 pounds per bushel or nearly \$2,000.00.

Grafted and Budded English Walnut

Having been very successful with our grafting of English Walnut on Black Walnut, we have an exceptionally fine lot of trees for this fall's planting. The grafted trees usually begin bearing the second year and are of very rapid growth.

To those of our customers who prefer the budded or grafted trees we are prepared to offer some excellent specimens of the MAYETTE variety which is the Grenoble nut of France. This is a large well-shaped nut with light-colored shell. The kernel is full-fleshed, sweet and nutty. It is quite late in blooming, thus enabling it to escape the disastrous effect of late frosts in the spring.

2-3 ft. Grafted, \$2.00 each; \$18.00 per dozen.

3-4 ft. Grafted 3.00 each; 25.00 per dozen.

LADY EDITH—The most delicious of all the English Walnuts—original or parent tree was found in Le Roy, N. Y., where winter conditions are very severe. The nut is of more than medium size, with smooth, handsome paper-shell thickness, full meated and of remarkable fine flavor. We can offer but a limited number this season.

2-3 ft. Grafted on Black Walnut, \$3.00 each.

Our Golden Anniversary Souvenir Rose Free With Every Order

Sober Paragon Mammoth Sweet Chestnuts

The Sober Paragon will thrive practically anywhere, east, west, north and south; it will withstand extremes of heat, cold and drought with less injury than most other trees. However, it requires certain things in the way of soil and drainage, as will be explained.

In choosing the site for a grove, select a rocky, or gravelly soil, well drained—the deeper the gravelly condition the better. The Chestnut even more than other trees, thrives by the mass of fine net-like roots, which its main or tap roots throws out, hence the stonier the soil the greater the quantity of fine roots.

It is absolutely essential that the ground be well drained for although the Sober Paragon Chestnut thrives best where it can make the greatest quality of fine roots, those will decay quickly in wet soil, causing the tree to die within a very short time.

Fall is perhaps the best time to plant Sober Paragon Chestnut trees, because then the soil is still warm from summer's sunshine and rain and rich with fallen leaves, etc. At that season too, the rain and melting snow of winter help to pack the earth more solidly about the roots, which is absolutely essential as no tree will thrive properly unless the soil lies tightly about each little root.

In planting always pack the soil firmly about the roots. If new land is to be used it should be ploughed once over before planting, if not too rough. Fertilize if possible with a combination of bone potash and nitrate of soda in the following proportions: 1,000 pounds of bone, 300 pounds of potash and 200 pounds of nitrate of soda per acre. For best results the bone and potash should be worked into the soil, while the nitrate of soda will do more good if put on in three or four different applications during the season. It is only fair to say that Col. Sober has never used a fertilizer of any kind, depending upon keeping his trees well mulched with straw and leaves. The tree shown in this picture is one of our specimen, 9 to 12 ft. trees loaded with burrs, full of

delicious large Sober Paragon Chestnuts. It is just such trees as this that you will need and such as this that we will ship to meet your needs. We offer for fall delivery, prices subject to the trees being unsold when order is received:

Our Golden Anniversary Souvenir Rose Free With Every Order

Harvest Scene—Six Thousand Bushels Sober Paragon Mammoth Sweet Chestnuts

For large orchard plantings we recommend our 3 to 5 ft. trees, each one already in bearing.

3 to 5 ft. Commercial Size	\$1.50 each; \$15.00 per dozen; \$110.00 per 100
6 to 8 ft. Home-Planting Size	2.50 each; 20.00 per dozen; 150.00 per 100
9 to 12 ft. Heavy Specimens for immediate effect in ornamental planting	5.00 each; 50.00 per dozen; 300.00 per 100

The Heavy Specimens mentioned above average 9 to 12 ft. in height, grafted, well rooted and beautifully branched, a specimen tree in every respect.

ALMONDS

Almond growing in the east has never been given the space or attention it really deserves. Everyone enjoys the Almond—one of the most delicious of all nuts. The retail market for the nuts in the east is the best in the world, yet while individual trees are often seen bearing so profusely throughout the peach area, commercial plantings are very scarce. Yet we raise the trees with no difficulty whatsoever at our Nurseries, with our cold northern New York temperature.

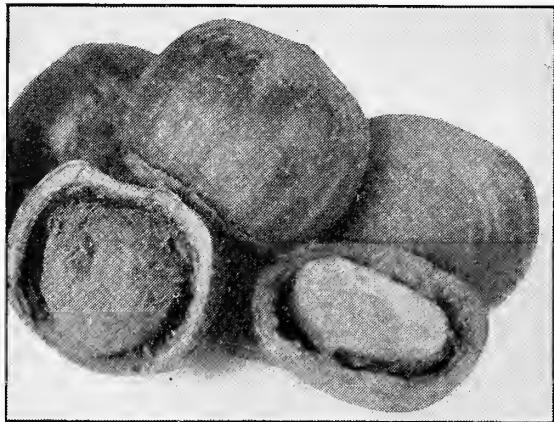

Dr. Robert T. Morris, one of the foremost authorities on nut trees in this country, has hard-shell Almonds growing on his estate in southern Connecticut, which have withstood temperatures which have killed his peach crop. A light, well-drained soil is best soil for the Almond and it is more tolerant of drought than most deciduous fruit trees. Even the soft-shell Almond (Princess Almond) has come through the last four winters with us without a single tree winter killing.

Specimen budded trees, soft shell, 3-4 ft., \$.50 each; \$5.00 per dozen
Hard shell, 3-4 ft., .50 each; 5.00 per dozen

Our Golden Anniversary Souvenir Rose Free With Every Order

Pure Strain Filberts for Universal Planting

The Filbert, both English and American varieties, is probably the least understood of all nut trees in the east. Yet it is a nut tree of great commercial value; at the present time in Europe and our own northwest, and will be in the near future throughout the States of the east and middle west.

It is perfectly hardy all through the north, withstanding at our nurseries 15 degrees below zero without winter killing, or injuring the crop, so that iron-clad hardiness, rapidity of growth, earliness of bearing, and great adaptability, are the four splendid qualities which mean a large and extensive planting all through the east.

The Filbert is of very rapid growth, the English varieties often coming into bearing the second year, the American varieties the third year. The yield increases rapidly from a quart or more nuts, so that by the tenth year the yield will often average fifteen pounds per

tree. This yield with 200 trees to the acre would be 3,000 pounds, which will bring from seven to fifteen cents per pound according to the varieties, ground and cultivation given the orchard. These figures are conservative, being based on actual results in the west, where it is grown as a commercial enterprise.

An orchard should be planted on a moderately rich, well-drained soil; moist, rather than not; and under such conditions the results will be wonderful, and far richer returns than from the ordinary fruit orchard. We offer the following varieties and sizes:

Kentish Cob. (English)—Nut large, oblong, somewhat compressed, kernel plump and of rich flavor; an excellent keeper. Husk quite smooth, longer than nut and but slightly cut in margin. Tree productive. Considered the best variety grown in England, where it has been known since 1812.

Prices: 2-3 ft., \$.75 each; \$ 7.50 per dozen; \$40.00 per 100.
3-4 ft., 1.00 each; 10.00 per dozen; 50.00 per 100.
5-6 ft., 2.00 each; 20.00 per dozen.

Purple Leaved. (Avellana Atro-purpurea)—Nut large, thin-shelled, delicious quality, one of the best. The leaves and husk are of a deep purple color, which is retained until frost. Very ornamental.

Hazlenut. (American Filbert)—Bears excellent nuts and in great quantities; also very ornamental.

Prices: 2-3 ft., \$.50 each; \$5.00 per dozen; \$35.00 per 100.
3-4 ft., .75 each; 7.50 per dozen; 50.00 per 100.

We offer this coming fall for spring, 1917, delivery a few specimen Filbert trees coming into bearing. These are grown particularly for those who desire immediate effect, standing 5 to 7 ft. in height.

Price: \$2.50 each; \$25.00 per dozen.

Our Golden Anniversary Souvenir Rose Free With Every Order

BLACK WALNUT

The American Black Walnut is one of the most valuable and enduring of our timber trees, also a magnificent shade tree, producing a rich, meaty nut, well known to us all in an abstract way perhaps, but not in a real personal way that comes from picking up these delicious nuts from your own lawn.

The Black Walnut is hardy everywhere—a rapid grower, increasing in diameter from 1 to $1\frac{1}{2}$ inches each year and ought to be widely and universally planted if only for its timber which has of late years become very valuable.

For reforesting large areas these trees are ideal and we can make a very attractive price when large quantities are desired for this purpose. We offer two grades:

3-4 ft., \$.50 each; \$5.00 per dozen; \$25.00 per 100
Special 6-8 ft., .75 each; 7.00 per dozen; 50.00 per 100

BUTTERNUT OR WHITE WALNUT

The White Walnut with its massive, straight trunk, its beautiful crown of heavy green foliage and its rich crop of Butternuts each fall is an asset to any home, and when given space and careful attention will produce extraordinary large nuts of excellent cracking qualities, filled with the richest meat. The nut possesses a most delicious flavor and is very nutritious.

This is the hardiest variety of the great Walnut family, being as hardy or harder than the American Black.

Extra heavy specimens, 5-7 ft., \$1.00 each; \$9.00 per dozen; \$60.00 per 100

American Persimmon or Date Plum

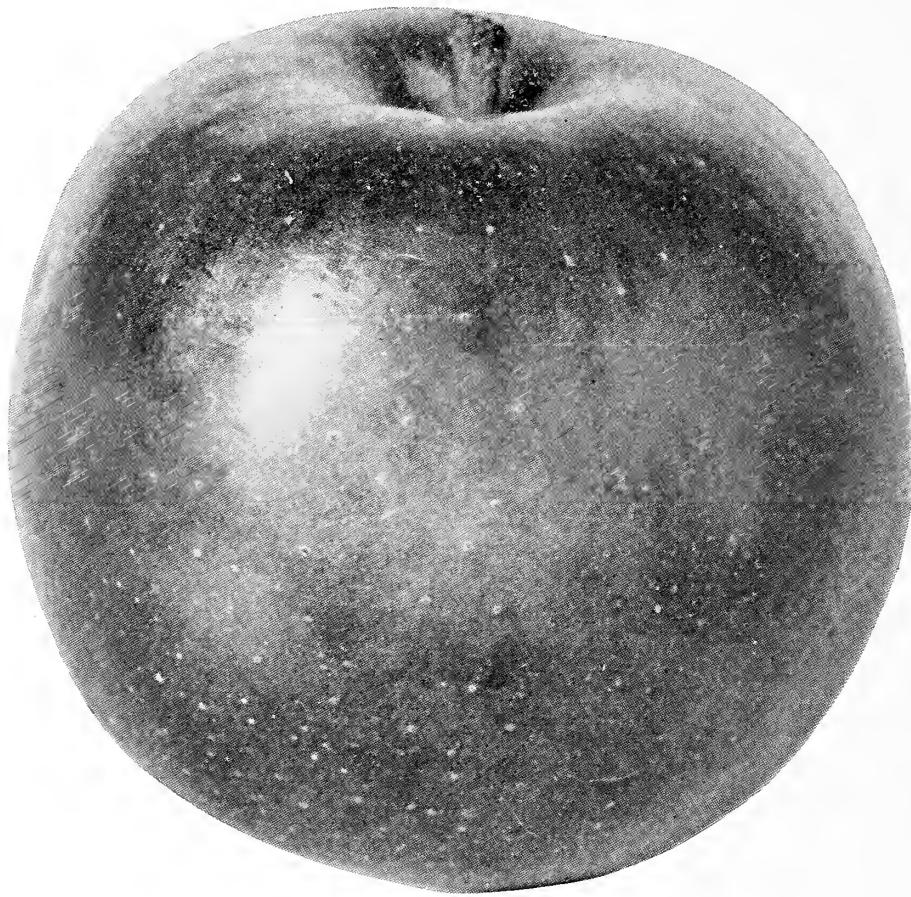

This species of fruit tree can be grown successfully throughout the north and will thrive and ripen its fruit as far north as the Great Lakes. Indeed we may safely say that the Persimmon may be planted any place where peaches will grow.

The fruit has had little attention in the north up to this time but these trees when given care and cultivation will produce a fruit as excellent and surpassing the finest southern varieties. This variety comes into bearing about the second year, the date of ripening being September and October, the fruit being delicious late in fall.

Persimmon trees will do well on almost any soil not too wet, but will show its appreciation if planted in a rich, warm soil, well exposed to sunlight and kept cultivated for the first few years until it becomes adapted to its new surroundings.

Extra fine specimens, transplanted: 3-4 ft., \$.50 each; \$ 5.00 per dozen.
4-6 ft., 2.00 each; 20.00 per dozen.

Our Golden Anniversary Souvenir Rose Free With Every Order

OPALESCENT

The Great American Eating Apple

No adequate description can be given of this variety except that indelible impression which is alone possessed by the fortunate mortal, who has had the pleasure of eating one of the Opalescents, the most delicious of the Apple family; no other variety will then truly satisfy.

The Opalescent is one of the most attractive in appearance, being very large and shapely in size, bright yellow in color, covered with a most brilliant red; flesh tinged with color. It is crisp, juicy, aromatic, tender, of the most luscious flavor, incomparable with any other variety we know of. Once tasted, never forgotten, is all that we can say.

Each one of our customers ought to have at least a few of these trees to produce this wonderful eating Apple for their own use and we specially recommend it because of its very easy culture.

For the large grower let us say that the Opalescent is a very vigorous grower, coming into bearing about the fourth year and yielding large annual crops at maturity. Both tree and fruit are decidedly resistant to all fungus diseases, an important item when the grower is raising for fancy markets. The Opalescent is also a splendid keeper, the season being November to March.

Commercial size, heavily-rooted trees:

5-6 ft., \$.75 each; \$5.00 per dozen; \$35.00 per 100

Our Golden Anniversary Souvenir Rose Free With Every Order

DWARF APPLES

The Dwarf Apple is little appreciated by the people of this country, although a favorite for planting in foreign lands. They are the most charming, lovable little trees, bearing at maturity unbelievable loads of the largest and handsomest apples. They come into bearing the third year and few of our customers realize the pleasure of having a few of these trees around their homes.

For those who have little room for large trees we offer the famous GLENWOOD grown Dwarf Apple of the following varieties:

Baldwin
Northern Spy
Wealthy
McIntosh
Opalescent
Yellow Transparent

\$.75 each; \$7.00 per dozen.

LUCILE

The Ideal Eating Grape

The Wonderful New Grape for the North

Everyone has room somewhere, some place around their home for a few Grape vines—over the fence, along the wall or on the trellis—it makes no difference where. Taking hardiness and quality into consideration, we offer the LUCILE—without doubt the finest of all eating Grapes.

A strong, robust grower and ripens its wood to the tip under a load of fruit, of which the Niagara would not ripen one half. Quality: sweet and delicious; color: dark, rich red. Its crowning glory is its size and compactness of its clusters which resemble those of Diamond but are larger. An indispensable Grape in the extreme north, where only early and extra hardy varieties can succeed.

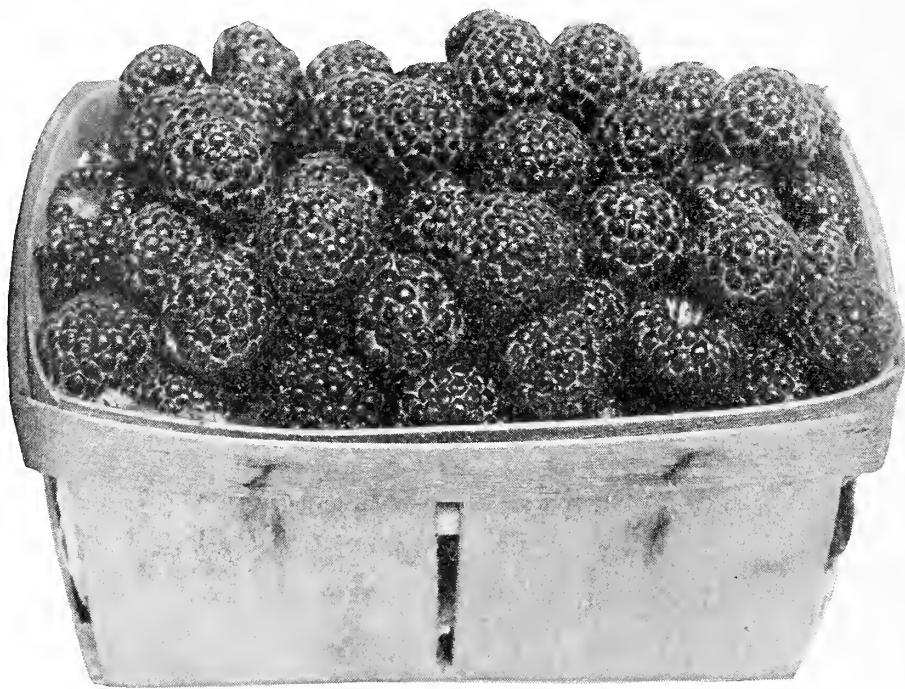

The State Agricultural Experimental Station at Geneva, N. Y., says:

"Lucile is of interest and value because of its truly remarkable vine characteristics. In vigor, health and hardiness and productiveness it is not surpassed by any of the cultivated native grapes. With all of its great work Lucile ripens its wood almost perfectly. It is very productive, as much so as any other of our native grapes, often bearing four bunches to the shoot, its crop exceeding that of Concord. It has never been known to winterkill in the grape region of New York. Its fruit and foliage are very nearly immune to the fungal diseases of the grape."

We offer extra heavy two-year-old vines: \$.50 each; \$4.00 per dozen

Our Golden Anniversary Souvenir Rose Free With Every Order

King of the Cliffs—The New Black Everbearing Raspberry

This, the only Black Everbearing Raspberry, after having been carefully tested for a period of years, we now offer with the full assurance that it is the most profitable and desirable market variety yet known, because of its immense size, firmness and great productiveness.

In hardiness and productivity it is unexcelled by any other variety. In size the fruit is simply enormous, the berries running from $7/8"$ to $15/16"$ in

diameter, and are of such handsome appearance that the fruit sells for from five to ten cents per quart more than other varieties. The color is glossy black and very attractive in appearance. The flavor is superb, being delicious for table use and splendid for canning. In respect to flavor it is one of the greatest acquisitions in years, surpassing all other black-caps.

King of the Cliffs was originated in North Dakota, where the mercury goes from fifteen to twenty-five degrees below zero, and where it has stood severe cold for several years.

Strong, hardy, two-year-old transplants: \$2.00 per dozen; \$15.00 per 100.

Herbert — The Great Commercial Raspberry

Peer of All American Varieties

The **Herbert Red Raspberry** is from a chance seedling found in the garden of R. B. Whyte, of Ottawa, Canada, some years ago. But it has only recently come to the notice of the American Horticultural Experts.

Its hardiness is unquestioned, growing vigorously and producing heavy crops as far north as Hudson Bay. But its preeminent qualities are its large size—larger than any other variety—its magnificent appearance, and delicious flavor. **The New York Experimental Station**, a recognized authority all over the country, says the Herbert is the most valuable Red Raspberry at the Station grounds. They continue:

"The merits of Herbert are: Great vigor and hardiness, being rather hardier than the well-known Cuthbert; comparatively few suckers; and, most valuable of all, tremendous productivity, being nearly twice as productive as the old standard, Cuthbert. The season is about that of Cuthbert but usually continues a few days longer."

It is almost impossible to find a description of its flavor—in which most of our customers will be interested. But it is safe to say the Herbert surpasses all others with its delicious melting flesh, full of rich creamy juice with a delicate wild taste all its own.

We offer heavy two-year-old plants: \$1.50 doz.; \$10 per 100; \$50 per 1,000.

Our Golden Anniversary Souvenir Rose Free With Every Order

ORNAMENTAL SECTION

The Paeony --- King of Flowers

The Paeonies are among the most royal, gorgeous, diversified and universally admired plants in cultivation. No class of plants in our public parks can compete with the Paeony in attracting attention. Moreover, America from Maine to California is the most highly-favored country in the world for its cultivation. Owing to the ease of cultivation everyone, whether possessing large or small space, may have a rich supply of these beautiful flowers.

The Paeony has not been planted enough in the past. Realizing this, we have employed Paeony experts both here and abroad to select the most beautiful and hardiest varieties for American culture. We mention the following eighteen varieties and recommend them to you as the ne-plus-ultra of all varieties of Paeonies yet offered. Each plant will be true to name and color.

Varieties: \$.35 each; \$3.50 per dozen (except where otherwise noted).

WHITE—*Festiva Maxima*—Rose type, very large, pure white, flecked with carmine-medium, early, odor pleasant, free flowering. Very good for cut flowers and landscape.

Price, \$.75 each; \$6.00 per dozen.

Duchesse de Nemours—Crown type, medium large, pure white, early, two days earlier than *Festiva Maxima*. Odor very pleasant, very free. Extra good.

Price, \$.50 each; \$4.00 per dozen.

Mad. de Varneville—Bomb type, large, very full, pure white, carmine-tipped central petals, early, odor pleasant, free. Extra good.

PINK—*Agida*—Semi-double type, medium size, violet rose, early blooming, no odor, free flowering. Excellent variety.

Edulis Superba—Crown type, rather flat, large, mauve (dark pink), early, odor pleasant. Extra good.

L'Indispensable—Bomb type, large, lilac white changing to violet rose, medium early, free blooming. Very good.

Mme. Calet—Rose type, large, pale hydrangea, pink, early, odor pleasant, free-flowering. Indispensable.

Queen Victoria—Bomb type, medium size, Tyrian rose, silver tipped, mid season, odor slight, free blooming.

Our Golden Anniversary Souvenir Rose Free With Every Order

RED—**Louis Van Houtte**—Semi-double type, medium size, rosy magneta (dark red), late, odor pleasant. Good.

Reubens—Single type, medium large, very dark crimson, late, odor pleasant, medium bloomer. Extra good.

Marechal McMahon—Bomb type, large, dark red, mid-season, odor lacking. Good variety.

Rubra Triumphans—Semi-double type, large, dark crimson, odor pleasant, free flowering.

Meisfoner—Bomb type, medium size, reddish purple, mid-season, odor pleasant, free flowering. Very good.

L'Eclante—Bomb type, very large, Tyrian rose, (brilliant red), mid-season, odor unpleasant, medium bloomer. Extra variety.

YELLOW—**Canari**—Bomb type, medium size, yellowish, late, odor pleasant, medium bloomer. Superb variety.

Price, \$.75 each; \$6.00 per dozen.

CREAMY—**Duc of Wellington**—Bomb type, large, white with sulphur center, odor very pleasant, very free. Extra good.

Price, \$.50 each; \$5.00 per dozen.

LILAC—**Pink. Berlioz**—Rose type, large, rosy magenta, mid-season to late, fairly free. Good variety.

Charlemagne—Rose type, large, lilac with bluish center, late, odor pleasant, free. Good variety.

Delachei—Rose type, large, rosy, magenta, late, very free, odor unpleasant. Extra good variety.

Concerning Above Description

Rose type: Full but not overcrowded with petals, inside petals also large.

Crown type: Show distinct guard petals, and a crown of small petals inside.

Semi-double type: A little more single than crown type. Thinner crown.

Bomb type: High built bloom with an abundance of uniform petals.

Single type: Single, small crown inside.

Size indicated refers to size of bloom, not of plants.

Color gives general effect, without going into detail.

Autumn planting of Paeonies is absolutely essential if bloom is to be had the following season. Only vigorous root-power can bring about this result and this root growth must be made before the ground freezes to winter depth.

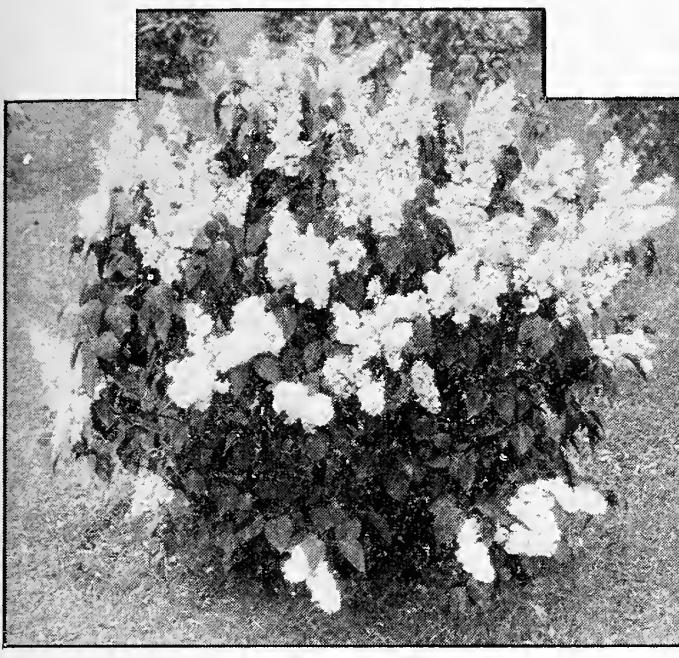

Our Golden Anniversary Collection, \$5.00

For this collection we have selected twelve of the choicest varieties, each one of superb beauty, including *Festiva Maxima*, *Duchess de Nemours* and *Madam Calet*. For those who desire an exquisite display, this collection surpasses anything heretofore offered, the varieties being among those selected by the International Gardeners for planting in the Royal Gardens at Corinth.

12 varieties, \$5.00

Our Golden Anniversary Souvenir Rose Free With Every Order

LILACS -- (Syringa)

Queen of Flowers

The Lilacs are among the most popular and beautiful of all flowering shrubs and have never been so available to everyone as now. Other flowers gain popularity for a season only but the Lilac, well known in years past, continues to be prized highly by all.

The Lilacs we offer are even an improvement over the old varieties and have been bred for the beauty of their plant form as well as for the delightful beauty of the flower.

A liberal use of Lilacs with their delicately-scented flowers and gorgeous tints make pos-

possible the most enchanting results. All varieties thrive in any fertile soil with a moderate amount of moisture. Either massed, in groups, or as single specimens the floral effects are most beautiful and we confidently recommend these valuable hardy shrubs.

Highland Park, Rochester, N. Y., is world-famed for its magnificent collection of Lilacs, which comprise 250 varieties. You, who have visited our fair city in the spring time and have had the pleasure of witnessing this grand display of Lilacs in bloom will be glad to learn that it is now possible for you to procure twelve of the very choicest varieties included in the Highland Park collection, in TREE FORM. You who have not been so fortunate as to see the Highland Park display will also welcome this opportunity of obtaining these twelve choice varieties for planting in your own yards and garden. The following are the varieties we have selected to grow permanently in our nurseries and you may order with absolute confidence that any or all of them will give you splendid satisfaction.

Prices: Specimens, extra heavy root and tops, \$.75 each; \$7.00 per dozen.

SYRINGA Japonica (Japanese Tree Lilac)—A remarkable new variety from Japan, becoming a good size tree. Foliage dark green, glossy, flowers small, feathery, but formed in great panicles often 18 inches long; very light straw color. Blooms a month later than other Lilacs.

S. Villosa—Decidedly a valuable variety. It is a very free bloomer; flowers in large, branching panicles; color is bud-flesh pink, changing to white; very fragrant. A late bloomer. One of the very best Lilacs.

S. Vulgaris. (Common Lilac)—The well-known old-fashioned Lilac, bluish-purple flowers.

S. v. alba. (Common White Lilac)—Small and narrow foliage. Flowers white with a bluish tint. Fragrant and free flowering.

S. Charles X.—Large shining leaves; trusses large, rather loose, flowers single; reddish purple.

S. Insignis Rubra. (Red Lilac)—An erect vigorous grower with large spikes of reddish purple flowers.

S. Ludwig Spath—New and believed to be the finest of its class. Color purplish red. A great acquisition.

S. Frau Dammann—New, pure white, deliciously scented. A profuse and early bloomer.

Our Golden Anniversary Souvenir Rose Free With Every Order

S. Marie Legraye—Planted very extensively in all parts of the country. Trusses large, flowers single white. Very desirable.

S. President Grevy—A lovely blue, flowers large and double, measuring three-quarters of an inch in diameter. Its clusters are large, at least 10 inches in length and 5 inches across. A grand Lilac.

TREE LILAC COLLECTION

For those who desire Lilacs in tree form, although more expensive to grow, if entire collection of one each of the above varieties is ordered we can supply these twelve distinct, beautiful trees for \$7.00.

Single specimens, headed 24-30 inches, \$1.00 each.

Superb and Hardy Phlox

There is no way in which the lover of colors in flowers can gratify his taste more fully and completely than by growing a selection of Phlox. No other flower will make such a gorgeous show of riot in bloom over such a long season which lasts from May until September.

These are the grand old-fashioned plants that have made the home grounds of the past a paradise and recall to all of us pleasant memories.

Phlox delight in a most fertile loam but will do well in most any soil and the culture is of the easiest. There are many varieties which differ mainly in time of blossoming and color. For our customers' convenience we have arranged them according to color and we are confident you will be delighted with these varieties which we so highly recommend:

Pure White	Magenta	White with Crimson Eyes
White with Lavender Eyes	Brilliant Pink	Rosy Carmine
White with Scarlet Eyes	Lilac Rose	Salmon Red
Bright Scarlet	Creamy White	Orange Scarlet
Crimson Purple	White with Lilac Eyes	Pale Pink
	Salmon Pink	

Selected two-year-old plants, \$.20 each; \$2.00 per dozen; \$15.00 per 100.
(Kindly order by color. This is for our customers' convenience.)

Specimen Shrubs

Berberis Ilicifolia. (Holly-leaved Barberry)—A charming shrub with holly-like, dark lustrous green leaves, which persist until mid-winter or spring. Native of Tierra del Fuego. Flowers orange-yellow, in short-stalked clusters. A rare sort of special merit.

1½-2 ft., \$1.00 each; \$9.00 per dozen.

Philadelphus Micropylus. (Small-leaved Syringa)—A small shrub, 2 to 3 ft. tall, with slender, rigid branches. Native of the Rocky Mountains. Leaves oblong, more or less coated with grayish down, one to one and one-half inch long. Flowers white, exquisitely fragrant. A most charming variety; no planting complete without it.

Specimens, 2-3 ft., \$.75 each; \$6.00 per dozen.

Lonicera Ledebouri—A rare variety of Honeysuckle; a strong, vigorous growing shrub with upright branches, dark green leaves of fine texture, flowers luxuriant, with round spreading lobes, scarlet-red outside. The most beautiful of all the Honeysuckles.

2-3 ft., \$.50 each; \$5.00 per dozen.

Caragana Arborescens—An exceptionally beautiful shrub, a native of Siberia. Beautiful yellow flowers in numerous small clusters, blooming through the spring and early summer.

Extra heavy, well-rooted plants, \$.50 each; \$5.00 per dozen.

Calycanthus—An early flowering shrub with a wealth of fragrant flowers and sweet-scented foliage; known commonly as Carolina Allspice. A well-drained, somewhat rich soil is preferable, but it may be shady or sunny as the planter prefers.

Two-year-old plants, \$.50 each; \$5.00 per dozen.

Ribes Sangunium (Red Flowering Currant)

A large beautiful shrub with handsome foliage and exquisitely graceful racemes of rosy red flowers which bloom in early spring. The bark is red, giving altogether a delightful touch to any landscape effects. Vigorous grower and hardy throughout the United States and northern Canada.

Specimen plants, 2-3 ft., \$.50 each; \$5.00 per dozen.

Our Golden Anniversary Souvenir Rose Free With Every Order

SPECIMEN TREES

Liriodendron - (Tulip Tree)

The Liriodendron is one of the noblest trees of the American forest, both in the gorgeous beauty of its flowers and foliage, and also on account of its magnificent appearance. It is a very rapid growing tree of great adaptability and is recommended by every tree expert as unsurpassed for lawn or avenue planting.

It is characterized by large showy flowers of tulip type and a greenish yellow hue blotched with orange. Leaves are of a lustrous bright green, large in size and delicate in shape. Grows best in a deep, rich slightly moist soil.

3-4 ft., \$1.00 each; \$10.00 per dozen. Specimens, 6-8 ft., \$2.00 each.

Copper Beech

A majestic tree of great hardiness and beauty, very imposing in any landscape on account of its rich, dark foliage which is coppery black and makes a strong contrast with all other scenery and foliage.

On account of this tree's splendid adaptability in all parts of this country we advise a large and generous planting, as the beauty of the tree even when young is very noticeable.

The Copper Beech will thrive in almost any soil, but does best in a rich sandy loam, where it assumes majestic proportions.

Selected specimens, 3-4 ft., \$1.50 each; \$15.00 per dozen.

FALL PLANTING

Many of our customers do not realize the advantages of fall planting and consequently delay putting in nursery stock until spring. Let us advise you that hardy trees, plants and shrubs may be planted in the autumn with perfect safety insuring best results. We offer in this booklet specialties which may be advantageously planted before the winter season sets in. The soil is now warm and mellow from the hot summer sun and August rains, and is in splendid shape to receive the roots of all kinds of plants. Moreover, the roots themselves will start making growth before freezing weather sets in, thus getting firmly established in their new home and ready to start forth at the first signs of spring.

Shipments will be made to Pacific Coast and Southern points throughout the winter. Shipments to Northern states will be made and planting can be safely done usually until Thanksgiving — always until the ground freezes.
